

KELLAR-STUDIO'S

VISUAL BRAND & GEOMETRIC LAYOUT GUIDE

1. CHROMATIC SYSTEM & COLOR RULES

This section hardcodes the digital color space assignments for Kellar-Studio's output assets. All software rendering profiles must be calibrated to sRGB targets using these precise hex codes.

Visual	Color Name	Hex Target	Primary Deployment Scope
	Midnight Onyx	#0B0C10	Primary canvas backgrounds, full-bleed solid plates.
	Deep Slate	#1F2833	Structural panels, bounding-box strokes, grid overlays.
	Studio Silver	#C5C6C7	Standard body copy text, metadata parameters, secondary labels.
	Electric Hertz	#00FFFF	Primary accent highlights, neon frames, glowing markers.
	Signal Amber	#FF6B00	Critical warnings, alternate titles, signature system stamps.

2. TYPOGRAPHY HIERARCHY & SIZING RULES

To preserve structural text authority across standard displays and mobile devices, apply the following font pairings and spatial configurations rules:

Primary Header Element (Category / Titles)

Font Target: Helvetica Bold, Montserrat Black, or equivalent high-weight sans-serif.
Sizing & Tracking: 18pt – 22pt font height. Tracking/Letter-spacing configured to -0.5px.
Color Scope: Pure White (`#FFFFFF`) or Electric Hertz (`#00FFFF`). Use exclusively uppercase formatting for major topic panels.

Technical Parameter Element (Data / Lists)

Font Target: Courier New, Share Tech Mono, or structural monospace variants.

Sizing & Tracking: 9pt – 10.5pt font height. Tracking/Letter-spacing configured to +1px (expanded broad tracking).

Color Scope: Studio Silver (`#C5C6C7`) or text blocked inside subtle dark cells.

3. PIP FRAME SCALING & LAYOUT GEOMETRY

When raw mobile screen recordings (e.g., from editing application views) are placed into a master distribution template, they must be contained in calculated geometric parameters to avoid a sloppy look:

The 85% Absolute Canvas Rule

- **Master Timeline Container:** Configure workspace canvas to a standard 16:9 widescreen or 9:16 vertical delivery ratio.
- **PIP Background Plate:** Fill the bottom-most track with a solid block of **Midnight Onyx** (`#0B0C10`), or drop a copy of the source asset blurred at a 40px radius with opacity dropped to 30%.
- **Source Scaling:** Scale the active screen capture layer uniformly down to exactly **85%** of the visible canvas width. Do not stretch or distort source tracking constraints.
- **Frame Boundary Stroke:** Apply a centered 2px width bounding border directly onto the PIP edge using the **Electric Hertz** (`#00FFFF`) accent value.

4. PLATFORM INTERFACE SAFE ZONES

All graphical callouts, text captions, and critical technical labels must be positioned within the interior safe boundaries to ensure zero occlusion by native application interfaces.

Vertical 9:16 Distribution Profiles (TikTok, IG Reels, YT Shorts)

- **Top Ceiling Limitation:** Keep critical branding data 12% below the top physical border to prevent profile information occlusion.
- **Right Lateral Limitation:** Maintain an un-cluttered buffer zone extending inward by 15% from the right edge to safely clear native interface button clusters (Like, Comment, Share icons).
- **Bottom Floor Limitation:** Keep descriptive overlay typography 15% above the lowest baseline border to prevent overlapping with standard system account labels or playback control trackers.

Widescreen 16:9 Distribution Profiles (YouTube Standard)

- **Lower Quarter Safe Area:** Avoid placing small text strings in the absolute bottom right corner, as platform thumbnail hover overlays and time-code trackers occupy this specific block.
